Properties list:

reusability
end-user packaging
single product
concept
office and stationery
folding carton
identity by shape
cardboard and paper
contemporary
identity by colour
identity by illustration

A sector is a mathematical tool invented by Galileo Galilei, precursor of the calculation rulers which accompanied the technicians until the last quarter of 20th century. A double box makes an ?english type? sector, totally functional, and also a container for the compass nece ssary for its use. It was developed as an institutional gift.
